

I created an assortment of simple shapes to represent fruit. Fruit is my favorite food. AI created a pizza all made out of circles. It did a very nice job of it but pizza is not my favorite food. I had a blue background while AI had a gray background. Its pizza also looked more like a button than a food. AI also added notes using //. I didn't have any noncode notes because I found the assignment to be short and simple. AI also added gaps between lines to create groups making it more organized, I did not do this. Other than that, the way we coded was pretty similar.
